Shared files

The File-transfer related directories are used to store configuration files.

When you execute a configuration job on node, the running configuration will be saved first and uploaded to the File-transfer /previous directory with the nodename in question as filename for backup purposes,

The /users directory can be used to create a personal subdirectory within to store your own configurations manually.

Firmware files used for OS upgrades are stored in the /os directory and are organized using a vendor-based directory tree. This these files are managed by the [OS-repository](#) which has its own front-end tools,

Uploading a file

To upload a file click the “Choose File” button in the desired directory and select the file in question and click the “Upload” button.

TFTP directory maintenance

Functional user - Yce exchange api (System) of NetYCE
